

Ideation Phase

Define the Problem Statements

Date	31 January 2025
Team ID	
Project Name	AI FAQ Assistant API
Maximum Marks	2 Marks

Customer Problem Statement Template:

A problem statement describes AI FAQ Assistant API from the customer's point of view. It keeps the team focused on what matters so the API solves real challenges faced by support teams, customers and developers.

A well-articulated problem statement helps the team find the ideal solution and empathise with how customers experience getting help today.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A support manager at a small online business	reduce the number of repeat questions my team answers	answering each one by hand takes most of the day	FAQs sit on a page customers do not read, and the chatbots we tried are not tied to our content	overwhelmed and worried about slow replies
PS-2	An online shopper	get a quick, correct answer about delivery, returns or pricing	I must search a long FAQ page or wait for an email reply	site search only matches exact words and nobody is online at night	frustrated and ignored
PS-3	A developer adding a help assistant to a website	connect my FAQ content to an AI answering feature quickly	LLM APIs return unverified text and offer no FAQ storage, search, security or docs	I must build retrieval, authentication and fallback logic from scratch	slowed down and unsure about accuracy
