Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It helps the team understand the people who will use AI FAQ Assistant API and see the problem from their point of view.

Reference: <https://www.mural.co/templates/empathy-map-canvas>

Example: AI FAQ Assistant API

User: Priya, support manager at a small online store with a ten-person team. Customers keep asking about delivery, returns and pricing, and she wants fast answers without giving customers wrong information.

Think & Feel • "My team answers the same questions all day." • Worried a chatbot will give wrong answers and upset customers • Wants customers to get quick, correct answers at any hour • Hopes to free the team for harder problems	Hear • Customers expect an instant reply • Colleagues say chatbots feel robotic or make things up • Developers suggest an API they can plug into the website • Competitors advertise AI-powered support
See • A long FAQ page that few customers read • A support inbox full of repeat questions • Chatbot tools with monthly per-seat fees • Customers leaving after waiting for a reply	Say & Do • Copies and pastes the same answers into emails • Updates the FAQ page by hand, often late • Asks "Can it answer only from our own FAQs?" • Tries chatbot tools and drops those that invent answers
Pain • Repeat questions take most of the day • AI that invents answers or sounds unsure • FAQ content gets out of date • No view of what customers ask that FAQs do not cover	Gain • Instant, accurate answers taken from her own FAQs • Source links and a confidence score on every answer • Smooth handoff to a human when the AI is unsure • Insight into missing FAQs, through one simple API
